

The Vecta Corp. Database

The Solutions table

The solutions table will be used to reference the solution a customer is having problems with. Three solutions will be added to this table including vProspect, vConvert, and vRetain. The relationship will be established between the solutionid primary key in this table and the solutionid foreign key in the tickets table.

Column Name	Data Type	Size	Key
solutionid	int / integer		PK
solution	varchar	10	

Data

vProspect

vConvert

vRetain
