

GridFs in PyMongo

GridFS Example in PyMongo

Used to store large binary objects or files in MongoDB.

```
>>> from pymongo import MongoClient
>>> import gridfs
>>>
>>> db = MongoClient().gridfs_example
>>> fs = gridfs.GridFS(db)
```

The simplest way to work with GridFS is to use its key/value interface i.e. to use `put()` and `get()` methods.

- ❑ To write data to GridFS, use `put()` method.
- ❑ To get back the contents of file use `get()` method.

Hands-On
