

# The Vecta Corp. Database

## The Employees table

The employees table will contain all of the employees for our fictitious Vecta Corp. company. Employees will provide support to customers and their interactions with customers will be tracked in the tickets table. Additionally, each employee will be assigned one of three roles. These roles will be stored in a separate roles table and a relationship will be established with that table and the employees table via the roleid foreign key.

Column Name	Data Type	Size	Key
employeeid	int / integer		PK
name	varchar	30	
username	varchar	15	
password	varchar	15	
email	varchar	30	
roleid	int		FK
