

Capped Collection

Capped Collections

Capped Collections are fixed size collections that support high throughput operations that insert, retrieve and delete documents based on insertion order.

What happens when we try to insert into a capped collection that is already full?

Creating Capped Collections

Unlike normal collections, capped collections must be explicitly created before they are used.

```
db.createCollection("my_collection", {capped : true , size : 100000 ,  
max : 100});
```

Collection can not hold more than "max" documents nor take up more than "size" space.

Hands-On
